Project History:

- Danny Page for Senate** 12/13
<http://dannypageforsenate.com>
Designed and implemented a WordPress based website for a political candidate running for U.S. Senate. Building the logo and layout for the site, I created a custom product that met my customer's needs.
- One Stone Nashville Church** 11/13
<http://onestonenashville.com>
Designed and coded a WordPress based website for a new local church in East Nashville. Work included branding for the church logo, designing the layout of the site, editing and coding the WordPress theme, and writing copy for the pages.
- Jared Ethan Black** 10/13
<http://jaredethanblack.com>
Branding and design for a website for speaker and writer Jared Black. Using a WordPress theme I designed the UX and UI of the site. I designed the logo and artwork on the website. Wrote some copy on the site, and optimized the site for search engines.
- House of Blessing Church** 6/13
<http://houseofblessingonline.org>
Parellax WordPress theme used to implement a small one page church site. UX and UI for the site as well as copywriting.
- Rashida La'el Photography** 3/13
<http://rashidalaelphotography.com>
Built and implemented a WordPress theme using Bones and Foundation 3 by Zurb framework. Implemented Vanilla Masonry for the tiling effect and designed elements for the site.
- Customer Management Interface** 1/12
<http://cscemi.us>
With a team of people we created and built a web application to optimize sales for a sheet metal company. We built this application for a company in need of a customer management system for their sales team throughout four branches. We took this company from using a spreadsheet to keep up with their customers to using a Facebook like interface that makes it easier to keep up with their customers needs. This application made them more mobile while helping personnel keep up with things at their convenience and at the same time aiding them in staying on top of the market. The system includes a "past due" setting that tells a salesman that it's time for a customer to be contacted. My contribution to the project was data, layout(UX, UI), customer liaison, and sales man.
